GIA Report 6237934845

May 01, 2026

Image is not to scale. Color is approximate.

Ruby

Ruby is the red variety of the mineral corundum. The name comes from the Latin word for red, ruber. Early cultures valued ruby because its color is similar to blood, leading to the belief that it held the power of life. The most famous source of ruby is Myanmar (formerly Burma), but other significant sources include Mozambique, Vietnam, and Thailand.

Characteristics

Mineral	Mohs Hardness	Toughness	Birthstone
Corundum	9	Excellent	July

Details

Item Description

Center stone with a client stated weight of 1.92 carats set in a white metal ring.

Weight

5.48 grams (gross)

Measurements

8.50 x 5.58 mm

Shape

Pear

Color

Red

Transparency

Transparent

Cutting Style: Crown

Brilliant Cut

Cutting Style: Pavilion

Step Cut

Results

Species

Natural Corundum

Variety

Natural Ruby

Geographic Origin

Not Requested

Additional Results

No Indications of Heating

Comments

The depth of the stone is not measurable due to the mounting.

FACSIMILE This is a digital representation of the original GIA Report. This representation might not be accepted in lieu of the original GIA Report in certain circumstances. The original GIA Report includes certain security features which are not reproducible on this facsimile.
